Professional Summary

Master's student in Digital Health & Data Science with a strong foundation in healthcare analytics, data visualization, and applied machine learning, backed by a biotechnology and clinical research background. Hands-on experience with medical datasets, biostatistics, Python-based analysis, and dashboard development—directly matching the requirements of a full-time role in data analytics, digital health, or healthcare research.

Education

Master of Science in Digital Health and Data Science

SRH Wilhelm Löhe Hochschule, Bavaria, Germany

10/2024 – Present

Bachelor of Science in Biochemistry, Biotechnology, and Genetics

Jain (Deemed-to-be University), Bengaluru, India · CGPA: 7.40/10

2021–2024

Professional Career

Data Analyst Intern

Brokenedge Sdn Bhd · Remote

01/2025 – 01/2026

- Collected, cleaned, and preprocessed structured and unstructured datasets using Python (Pandas, NumPy) to support internal reporting and data-driven decision-making; performed exploratory data analysis (EDA) to surface trends, patterns, and anomalies across campaign and operational data.
- Designed and built dashboards and visualizations using Matplotlib and Seaborn to communicate key metrics to stakeholders; maintained data accuracy and consistency across reporting pipelines through regular quality checks.
- Wrote Python scripts to automate recurring data extraction, transformation, and monthly reporting workflows, reducing manual reporting time.
- Analyzed campaign and performance data to generate actionable insights presented to the strategy team; collaborated cross-functionally with marketing and strategy teams to translate business questions into analysis tasks.

Notable Projects

Breast Cancer Diagnostic Dashboard

04/2026 – 05/2026

- Interactive Plotly Dash app for malignant/benign tumor classification with adjustable decision threshold and per-sample feature explanations; built on a scikit-learn classifier trained on diagnostic tumor features to expose sensitivity–specificity trade-offs for clinical review.

Medical Appointment No-Show - Exploratory Data Analysis

01/2026 – 03/2026

- Analyzed a large patient appointments dataset using Python and pandas, engineering features (lead time, prior no-shows, SMS reminders, day of week) to identify key drivers of missed appointments and inform intervention points in the patient journey.

Skincare & Digital Health Web Application

12/2023

- Full-stack Flask web app delivering personalized skincare recommendations via a rule-based intake and content-personalization engine; designed a guided UI flow to maximize user engagement with health content.

Skill Summary

Programming: Python (Pandas, NumPy, Matplotlib, Plotly), R, SQL

Data Analysis & Statistics: Data cleaning, preprocessing, exploratory data analysis (EDA), statistical analysis, and biostatistics.

Machine Learning: scikit-learn (regression, classification), model evaluation.

Visualization & Dashboards: Plotly Dash, Streamlit, Power BI, Excel.

Databases & Tools: Git, Git LFS, PostgreSQL, JASP.

Healthcare & Domain Knowledge: Clinical & healthcare datasets, health informatics, electronic health records (EHR), biomedical data standards (HL7/FHIR), data privacy & compliance (GDPR/HIPAA basics).

Languages: English – C1 · German – A2 (B1 in progress) · Bengali – Native
